

iPhone Users reaction towards Android Tweets

Nikitha Lakmarapu

School of Computer Science and Information Systems, Northwest Missouri State University

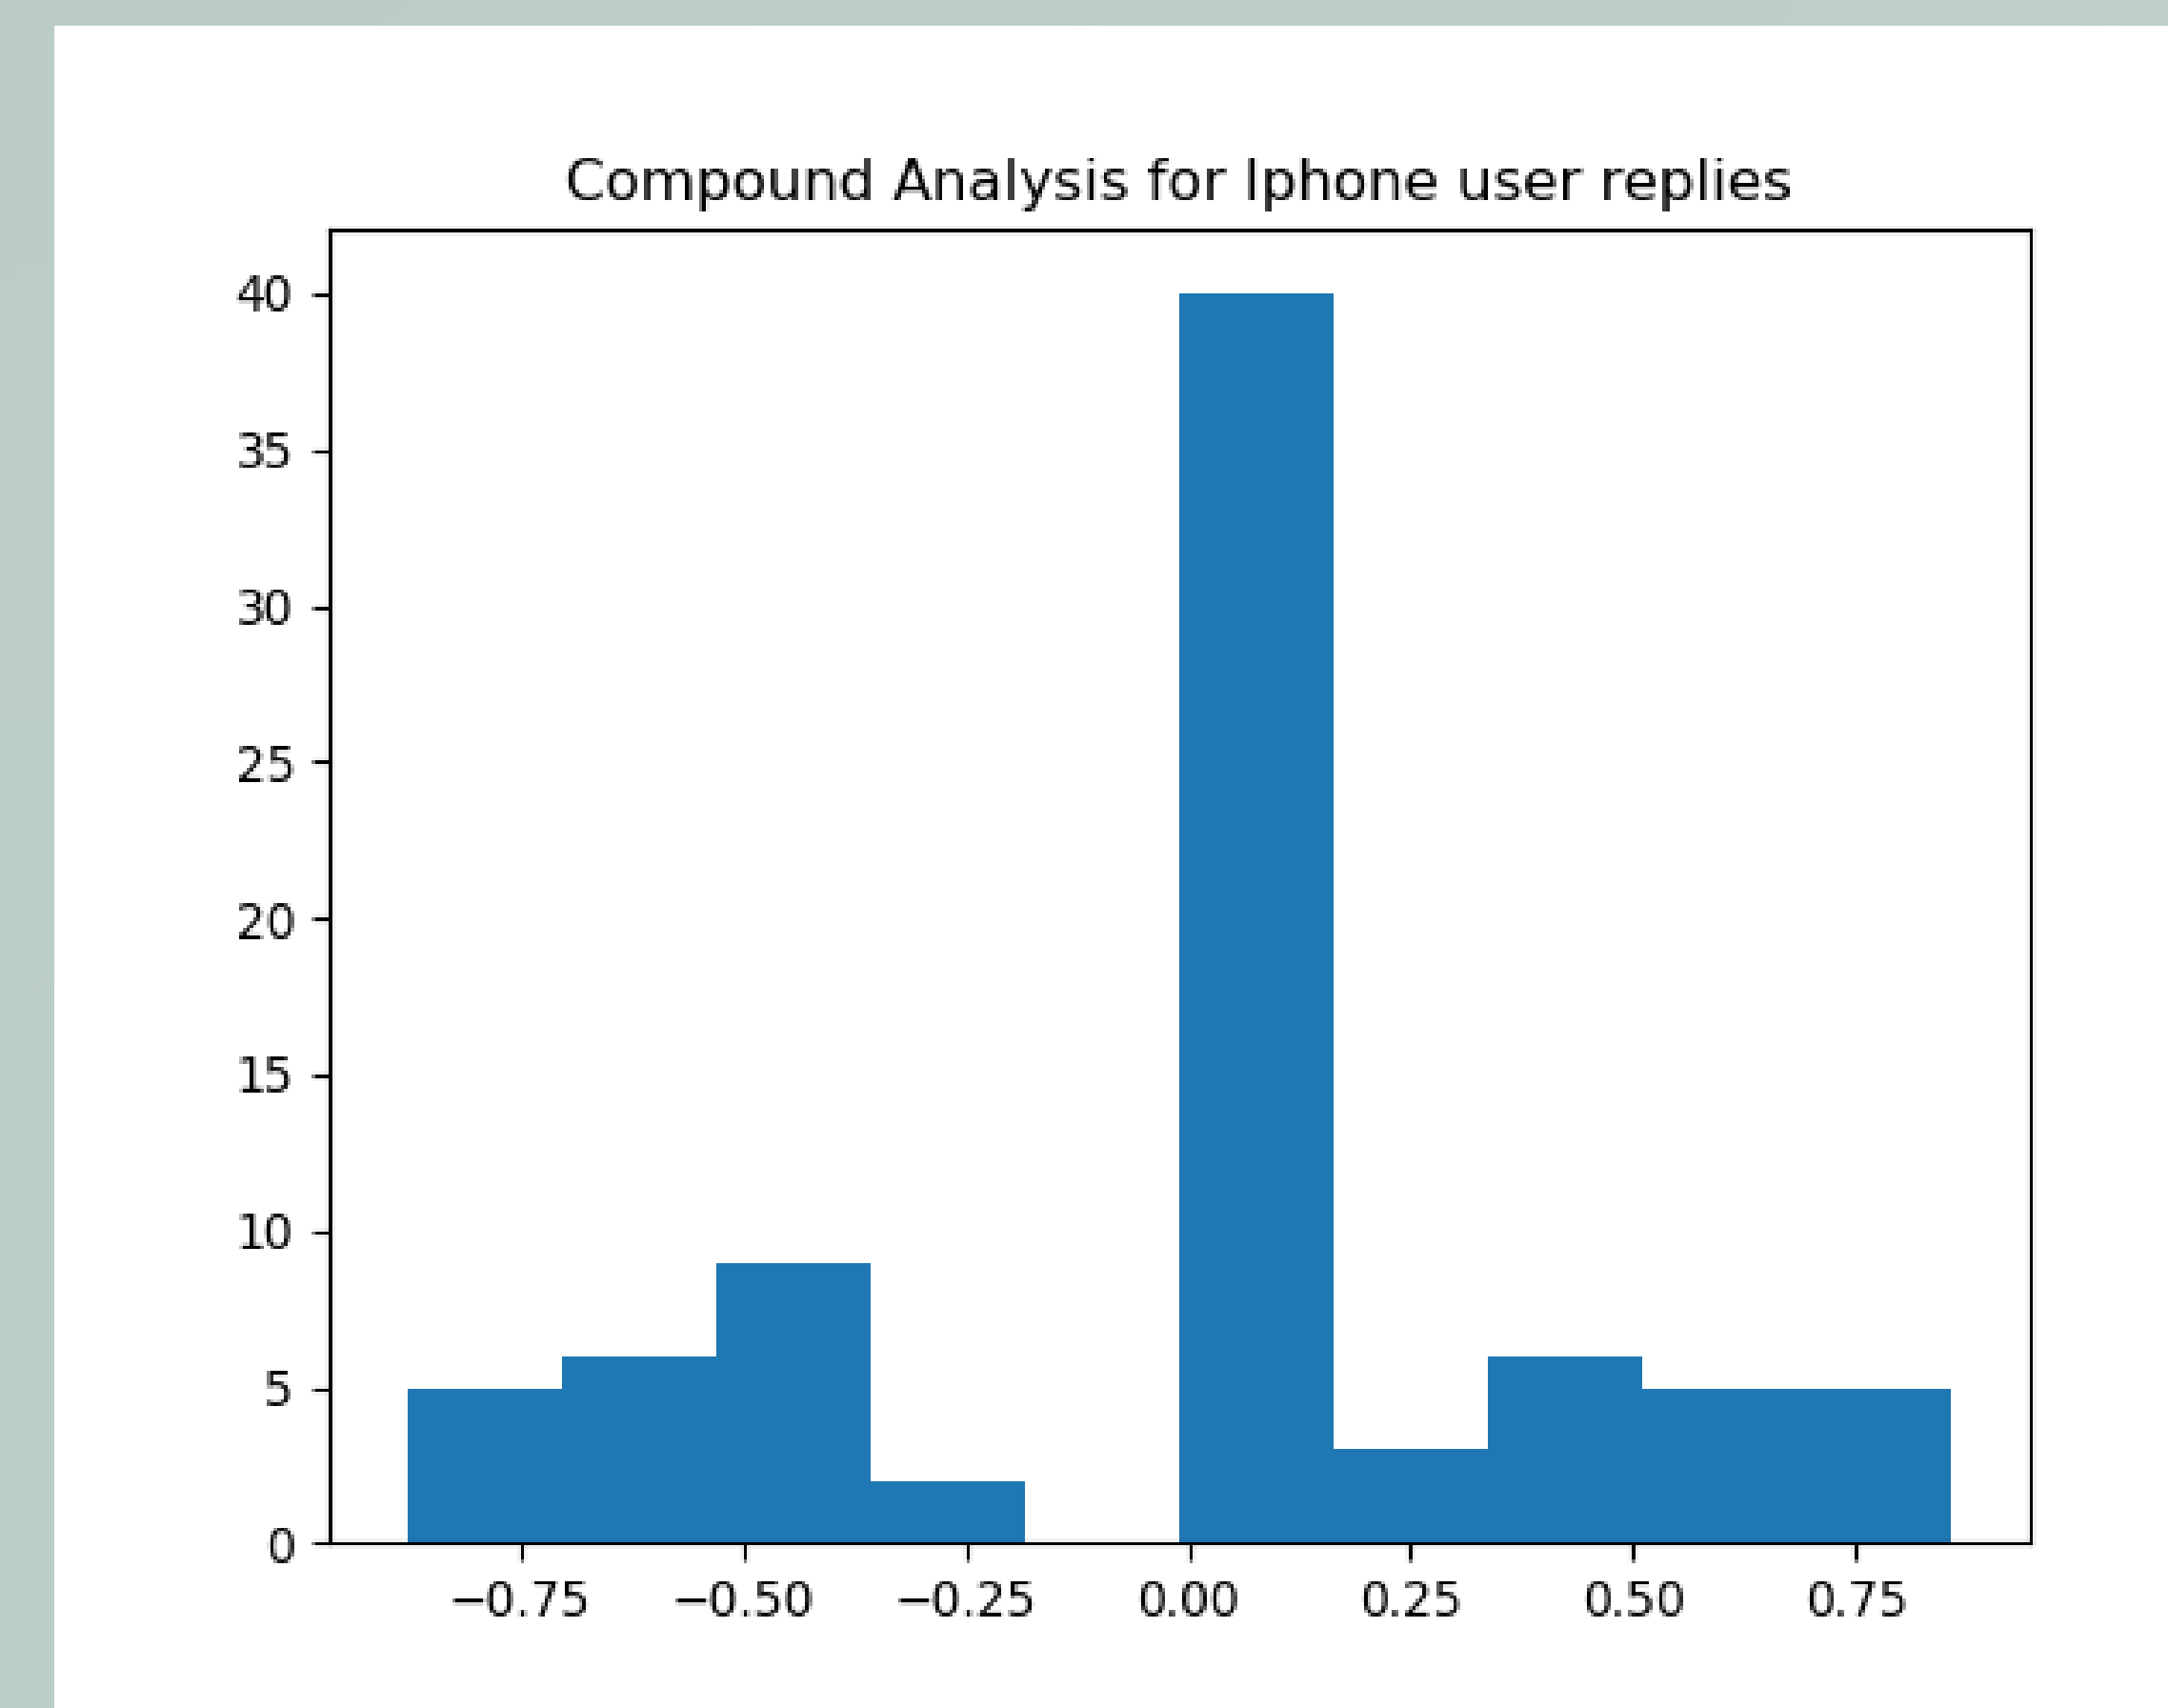

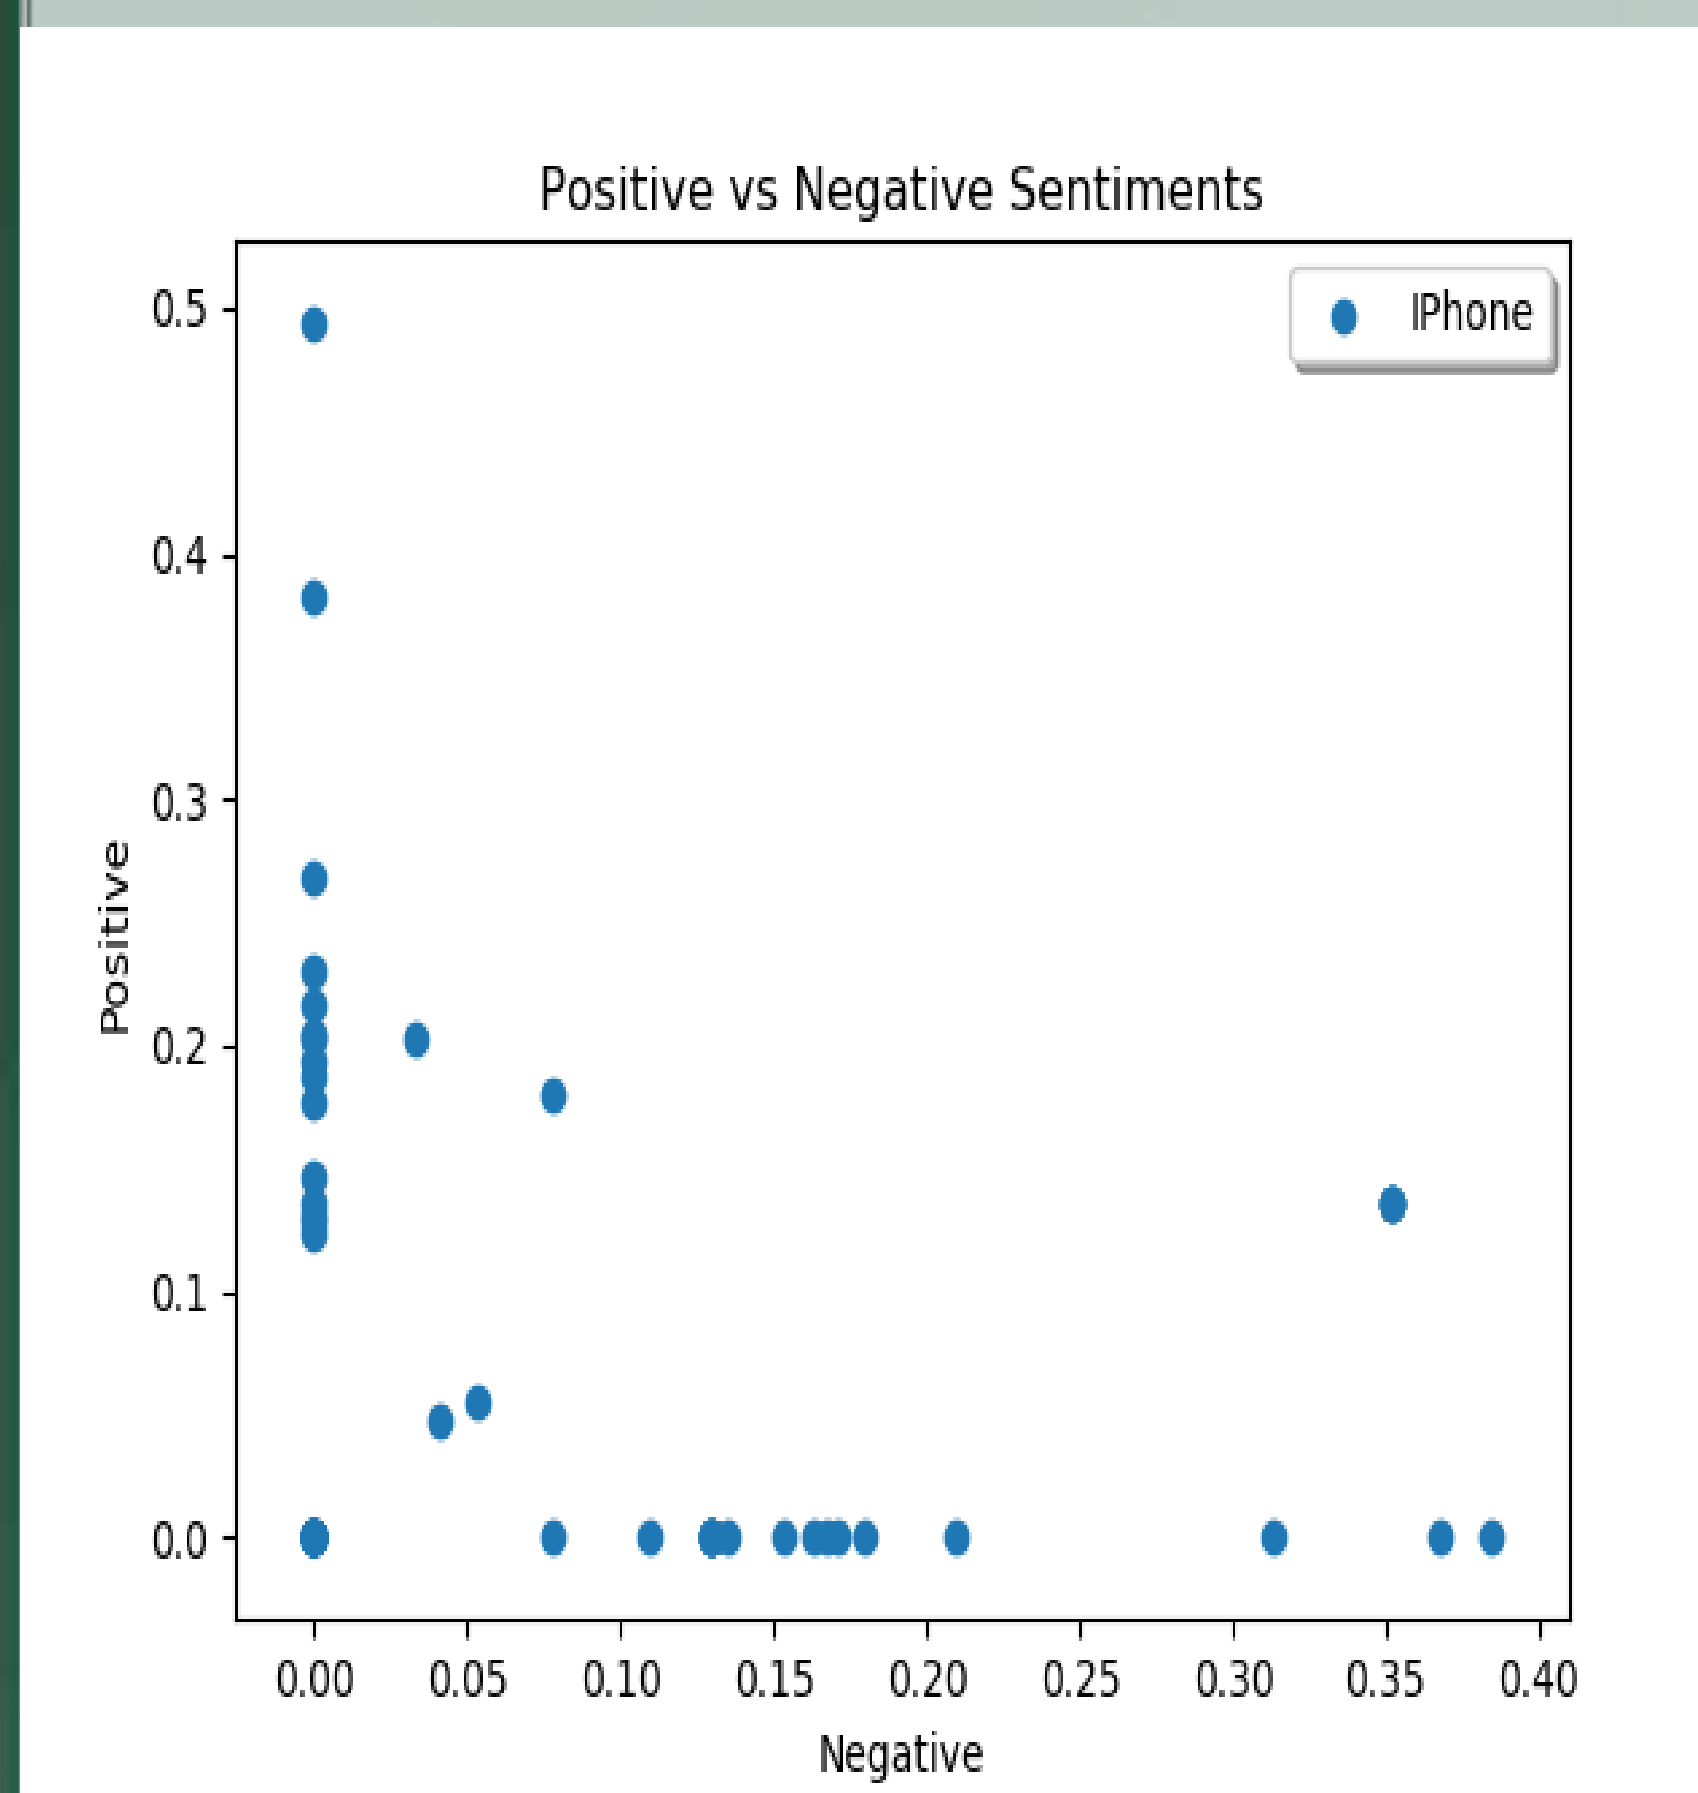

Introduction

- The goal of this project is to find the reactions of iPhone users for the tweets related to Android.
- Finding Compound sentiment analysis for iPhone Users Reply done to Android Tweets.

Methods

- I used Python Tweepy module to grab tweets for Android Account.
- I also used Twitter API for cursor which is used to grab information through redirected pages.
- I grabbed information from 2 pages which contains about 200 replies for tweets of Android.

Results

- Based on the results from this analysis, It is clear that iPhone users are more negative towards the tweets of android.
- They less agree to the statements done and less satisfied to the tweets of android.
- Replies from iPhone users where mostly negative and neutral to the tweets.

Conclusions

- Looking back to the Question:” Are iPhone users positive when tweeting about the android event/tweet?” Based on the results I can make some assertions.
- iPhone users are not so satisfied with the tweets done by the Android.
- 85% of iPhone users are negative and neutral when there is a tweet or event about Android.
